

Ekahau Insights

Wi-Fi Performance Analytics with Automatic Issue Identification

Automated, Fast & Easy Wi-Fi Performance Analytics

Ekahau Insights is a professional-grade Wi-Fi analytics tool that gives you instant visibility into Wi-Fi network performance and design quality across all your sites. This interactive dashboard provides you with actionable intelligence to improve the Wi-Fi experience for your users and minimize downtime at every site.

Insights automatically calculates compliance to key design requirements, network health, network inventory and survey statistics, giving you instant visibility into key performance indicators across all your sites and enabling you to easily isolate and troubleshoot the root cause of issues without the need to open up individual project files and inspect floor plans one by one.

Included with Ekahau Connect, Insights extends the collaboration capabilities of Ekahau Cloud with more granular rights management over shared project files as well as the ability to share a read only view of site statistics and heatmaps to users without Ekahau licenses. The tagging capability simplifies file and workflow management by making it easy to organize, search, filter and find what you're looking for.

Key Features

- Network health, inventory and survey statistics for all your sites in a single repository
- Built-in analysis of network coverage, signal to noise ratio, channel interference and network health against your requirements for every site
- Automatic issue identification and drill down with heatmap cloud viewer
- Enhanced project sharing with more granular rights management, including the ability to transfer project ownership
- Collaborate easily with users without Ekahau licenses by sharing guest links to project statistics and online heatmaps
- Organize and add context to project files with searchable and filterable tags

Global Network Insights

Search and Sort Projects

Filter and find projects by site location, tags, and last survey activity date.

Rank Projects by Network Health

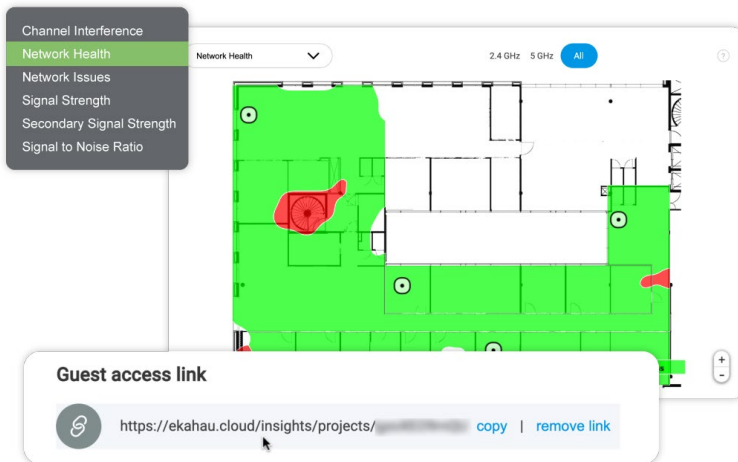

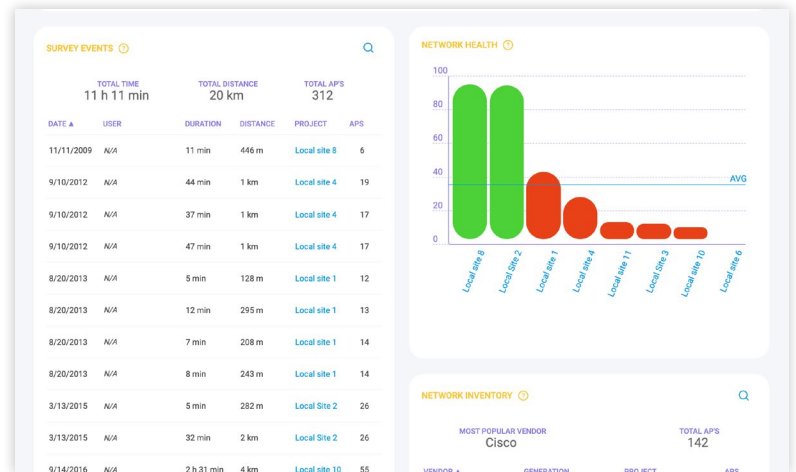

Get an instant breakdown of Wi-Fi performance with network health scoring.

Network Inventory Overview

Get a complete breakdown of APs in use, their technology generations and where they are located.

Survey Events Statistics

Access a full list of survey events, time invested and distances covered to ensure you have regular surveys across all sites.

Project-Specific Insights

Automated Analysis

View how your network performance compares to your requirements by site, floor and area within a floor.

Heatmap Viewer

Review heatmaps and visualizations for primary and secondary signal strength, channel interference, network health, network issues, and signal to noise ratio.

Project and Results Sharing

Allocate full access / write / read rights, transfer the ownership of project files, and share private URL links to users without an Ekahau license.

Project Tagging

Use tags to easily organize and add context to your projects such as client names, site types, workflow state and more.

System and Solution Requirements

- Latest version of Chrome, Firefox, Safari, or Edge web browsers. Chrome recommended for best experience.
- Ekahau Connect Subscription
- Ekahau Sidekick recommended
